Instrument Protection

- It won't corrode or stain metals, even when carbide, stainless or aluminum instruments are mixed, resulting in protection of valuable instruments for longer life.

Surfactant Synergy

- Contains a blend of anionic and nonionic surfactants. These surfactants ensure that the instruments are clean and free of fragments that can redeposit during the cleaning process.

Efficient Process

- Liquid mixes instantly and dissolves completely without leaving any residue in the ultrasonic cleaner compared to tablets.
- Non-foaming with a fresh pleasant scent.

“ Monarch 4+ enzymatic cleaner is the best instrument cleaner I've come across. It's easy to use, cleans the instruments the first time through, smells fresh, and isn't thick or gunky like some other products I've tried. It only takes ½ a cap full, so a little bit goes a long way. ”

Karen Webster RDH, PHDH
