Find out how easy and intuitive ScanX Intraoral View's interactive touchscreen system can be.

ScanX Intraoral View

The digital radiography system with a touchscreen and WiFi for all intraoral formats

As with any sizable investment, the decision to purchase a digital radiography system can be a daunting task. But in the interest of greater efficiency and increased productivity, many practices are making a smooth transition to a modern, digital workflow with the use of PSP technology, whose advantages include reliable diagnostics, an easy-to-use interface, and an immediate ROI.

Air Techniques' ScanX Intraoral View digital radiography system enables the intuitive, efficient, and time-saving digitization of PSPs for all intraoral formats. The high-resolution images allow the dental professional to accurately diagnose and convincingly show

patients their treatment options, providing a faster and more intuitive workflow.

"For anyone looking to upgrade or change to digital radiography, ScanX Intraoral View offers a simple, modern transition for the dental practice," said Ron Kaminer, DDS, MAGD, a noted speaker and Dental Product Shopper Advisory Board member.

ScanX Intraoral View's imaging software automatically optimizes and saves all images. Diagnosis-supporting filters can also be used to adjust the contrast and sharpness of images. This enables a more detailed diagnosis that allows the clinician to convincingly explain potential options and treatment plans to patients.

"If you diagnose, you will produce more dentistry. So, having a current system like

the ScanX Intraoral View that produces great image quality is essential," Dr. Kaminer said.

PSP technology makes it very easy to switch to a digital workflow, and because of the wide range of formats, the ScanX Intraoral View allows operators to process on a single device.

"Phosphor plates in general are more comfortable than sensors. They're easier to place in the mouth and they exhibit great image quality," Kaminer added.

WiFi allows the ScanX Intraoral View to be easily integrated into an existing network. Multiple scan jobs can be simultaneously requested from different stations.

"ScanX's LCD screen allows for exact monitoring of the process. Its wireless capability allows for flexibility in placement anywhere in the office," Kaminer added.

section 179

TAX SAVINGS

Take advantage of the increased deduction limit for section 179. You may deduct the full cost of dental equipment from your 2018 taxes up to \$1 million.

Consult with your tax advisor for further information.
