All pumps comply with NFPA 99C level 3 requirements.
All installations must conform to local codes.
**MOJAVE SYSTEM CONFIGURATION**

**Recommended Number of Simultaneous HVE/SE Users**

**MOJAVE LT3 Dry Vacuum System Operation**

1. Gas/Liquids/Solids from the Treatment Room into Air/Water Separator.
2. Heat Exhaust to Outside Vent
3. Liquids/Solids from the Air/Water Separator to Sewer Drain
4. The LCD touch screen provides the operational user interface for the MOJAVE LT3 system.

**UL60601-1 Classification**

Protection against electrical shock (5.1, 5.2) Class I, Transportable, Continuous Operation. No applied parts. Protection against ingress of liquids-Ordinary Equipment not suitable for use in the presence of flammable anaesthetic mixture with air or with oxygen or nitrous oxide.

**MOJAVE LT3** vacuum pumps comply with NFPA 99C level 3 requirements.
TREATMENT ROOM PLUMBING INSTALLATIONS

**SUB FLOOR INSTALLATION**  
Recommended system installation layout should be used whenever possible.

- Use only 45° elbows to make turns in main line.
- Make sure to use the proper pipe type for associated system.
- If piping is diverted to clear an obstruction, **DO NOT MAKE A TRAP**. See detail A, Main Line Turn Connections.
- **DO NOT** use standard 90° elbows.

**Notes:**
1. 10-foot Maximum Height from Main Line to Tank.
2. Consult Dental Unit Manufacturer’s Guidelines for correct reduced size and height of termination of vacuum line inside junction box.
3. Limit branches. Orient main line under junction box or cabinet.
4. When piping line is above 3/4” I.D. or larger, use 45° Y’s & elbows only.
5. Recommend installing separate line connection for scavenger when using Nitrous scavengers in overhead piping installations.

**CONNECTOR DETAILS - ALL INSTALLATIONS**

- **IMPORTANT:** All installation pipes and fittings provided by plumber.
- **Important:** All installations must conform to local codes.

- **Use only 45° elbows to make turns in main line.**
- **Make sure** to use the proper pipe type for associated system.
- **If piping is diverted** to clear an obstruction, **DO NOT MAKE A TRAP.** See detail A, Main Line Turn Connections.
- **DO NOT** use standard 90° elbows.

**Notes:**
1. 10-foot Maximum Height from Main Line to Tank.
2. Consult Dental Unit Manufacturer’s Guidelines for correct reduced size and height of termination of vacuum line inside junction box.
3. Limit branches. Orient main line under junction box or cabinet.
4. When piping line is above 3/4” I.D. or larger, use 45° Y’s & elbows only.
5. Recommend installing separate line connection for scavenger when using Nitrous scavengers in overhead piping installations.

**OVERHEAD INSTALLATION**  
Alternate system installation layout should be used only when unable to use the sub-floor plumbing layout.

- **Minimum Slope:** 1/4 inch per 10 Feet
- **1/2-Inch Diameter Riser**
- **10-FT Maximum Height** from Riser Trap to Main Line

**Ceiling**

**Junction Box**

**See Note 2.**

**Sub Floor**

**Riser**

**Connection**

**See B.**

**Main Line Turn**

**Connection**

**See A.**

**Riser Trap**

**See D.**

**IMPORTANT:** All installation pipes and fittings provided by plumber.

**Important:** All installations must conform to local codes.
Installation Notes.

A. **PUMP INSTALLATION SPACE** - Area for **MOJAVE LT3** pump in typical installation.

B. **SEWER DRAIN** - Provide a drain for the removal of waste liquids from the Air/Water Separator assembly. Use an open drain pipe (1 ½ inch P-Trap with 1 inch air gap or floor sink) or a closed vented drain. See Figure above.

C. **HEAT EXHAUST** - Refer to Figure above and see Plumbing Requirements for the exhaust vent line required for **MOJAVE LT3**. Schedule 40 pipe can be used on **MOJAVE LT3**.

D. **PUMP ELECTRIC SERVICE** - The **MOJAVE LT3** pump is wired directly with a dedicated 220V, 20 AMP, single phase 50/60 Hz circuit. If Main Circuit panel is not located in equipment room, a disconnect box with approved ground is needed for each pump. Disconnect boxes should be mounted no more than 3 feet of the installation center line.

E. **OVERHEAD INSTALLATION VACUUM LINE** - See Plumbing Requirements for **MOJAVE LT3** connection.

F. **SUB FLOOR INSTALLATION VACUUM LINE** - See Plumbing Requirements for **MOJAVE LT3** connection.
HEAT EXHAUST CONNECTION NOTES

1. VENT LINE - The exhaust vent line required for MOJAVE systems. Use PVC Schedule 40 pipe for the facility vent line. Do not make a trap in the exhaust vent piping. Do not use 90° fittings. Also see Exhaust Vent Protection and Ventilation Requirements below.

2. PUMP EXHAUST VENT CONNECTION - Connection between the pump heat exchanger output and exhaust vent piping is typically made via the supplied 1½-inch tubing.

3. DRIP LEG and EXHAUST VENT ASSEMBLY - The supplied Drip Leg and Exhaust Vent Assembly must be installed at the lower end of the vent pipe to collect condensation produced during pump operation. The bottom of the Y connector should be located 18 inches from floor. Attach the drain tube to the drip leg quick-connect fitting to allow drainage into floor drain/sink.

Exhaust Vent Protection.
If the exhaust piping is venting to the outside of the building, precautions must be taken to protect the equipment room from weather elements and animal intrusion. This can be accomplished by using one of the three methods shown on the right.

Exhaust Vent Requirements.
The MOJAVE equipment must be used in a controlled-temperature environment. Maintain equipment room temperature between 40 and 105 degrees Fahrenheit. An exhaust fan is necessary if room temperature is not maintained by other methods.
Adequate forced ventilation must be provided across the unit by placing an appropriate exhaust fan opposite an equivalent air intake vent. The fan should be placed higher than the associated intake vent. Recommended minimum exhaust fan requirements for each MOJAVE unit are listed to the right.
For over 50 years, Air Techniques has been a leading innovator and manufacturer of dental products. Our priority is ensuring complete satisfaction by manufacturing reliable products and providing excellent customer and technical support. Whether the need is digital imaging, utility room equipment or merchandise, Air Techniques can provide the solution via our network of authorized professional dealers.

Proudly designed, tested and manufactured in the U.S., our products are helping dental professionals take their practices to the next level.
