Monarch Enzymatic Cleaner contains a neutral pH formula and higher concentrations of detergents and enzymes, resulting in:

- Optimal cleaning results.
- Protection of valuable instruments for longer life.
- Process efficiencies.

This uniquely formulated, presoak cleaner and ultrasonic detergent will effectively remove blood, tissue, fats, carbs, sugars, and other difficult debris from surgical instruments, and assist in complete cleaning before sterilization.
Soak and hold instruments in Monarch Safety Tray to make them easier to clean later. The tray also provides a safer way of transporting the instruments from the operatory to the instrument processing area.

**Monarch Safety Tray**

- Facilitates easy and safe instruments processing.
- Removable perforated tray allows for easy rinsing, draining and pick-up of instruments.
- Hinged cover protects staff from bath-generated aerosols.
- Constructed of heavy gauge, high-impact plastic.
- Holds 3 quarts; fill lines designate 1-quart increments.

**Surfactant Synergy**

Monarch Enzymatic Cleaner contains anionic and nonionic surfactants. These surfactants ensure that the instruments are clean and free of fragments that can redeposit, especially in presoaking, manual and ultrasonic cleaning, and are excellent in removing lipid/fat soils.
