Equipment
Monarch Cleanstream Evacuation System Cleaner

Air Techniques is North America’s leading manufacturer of dental vacuum systems. Monarch CleanStream has been carefully formulated from years of experience and research to help you optimize system performance and keep your vacuum system running smoothly.

- Unique formulation removes and prevents debris build-up in evacuation lines maintaining peak performance and suction.
- Cleans and deodorizes evacuation lines for all wet and dry vacuum systems.
- Non-foaming, highly concentrated formula is very economical to use.
- Compliant with BMP for dental amalgam waste: Non-oxidizing and a pH of 8.
- Non-corrosive, for daily use.

Easy Dispensing:

1. **Step 1**: Add CleanStream and shake!
2. **Step 2**: 1st Operatory — Use upright. Half the solution will automatically be aspirated.
3. **Step 3**: 2nd Operatory - turn the bottle on its side and dispense the rest.

Your utility equipment is the heart of your practice and greatest investment. Waste contaminants can build up in evacuation and water lines causing reduced equipment performance and premature failure. Monarch equipment cleaning products are designed to protect you, your patients, and your valuable investment.
Monarch Cleanstream Dispenser System

Monarch CleanStream is most effective when used with the CleanStream Dispenser. The specially designed Dispenser enables easy, no-mess, no-spill mixing and cleaning of two operatories with just one bottle.

- Easy as 1,2,3: Just mix, shake and aspirate.
- Dispenser automatically aspirates the solution into a fine mist, completely covering the inside tubing walls.
- Dispenses the right amount of solution for each operatory — no monitoring needed.
- Closes tightly to carry between operatories without spilling.
- Fits all HVE and saliva ejector tubings.

Monarch Lines Cleaner

Monarch Lines Cleaner is a proven formula for dental unit waterline treatment controlling microbial contamination.

- Fast, effective, and efficient application: Shock and maintenance treatment in one product.
- Removes biofilm from dental unit waterlines containing odor-causing bacteria.
- Non-corrosive solution is ready-to-use. No mixing or diluting required.
- Replaces daily water cleaning tablet; leaving no residue in bottle.
- Does not affect bond strength.
- Mint fragrance.

Tested effectively in Dental Advisor Labs. When tested over a 3-month period, bacterial concentrations met or were below the 500 CFU/ml level recommended by the CDC. This level was observed as early as the first week of treatment.
### Two Dispensing Options

- **Use with 1 HVE & 1 SE**

- **Use with 2 HVE & 1 SE**
